

Assignment: Reconciliation-Table

Step	Description	Adjustment	Result	Reason
0	Naive count of all communication-log rows	—	30	Every row is initially treated as one send attempt.
1	Exclude campaign 9004	-4	26	Campaign 9004 is approval_awaiting, so it is not included as the 9004 campaign was ineligible according to the readme provided in the word document:
2	Reconcile retry chain 9001 → 9002 → 9003	-3	23	The chain contains 13 send attempts but represents 10 distinct customers; retry attempts are not separate underlying communications.
3	Investigate standalone campaign 9101	0	23	9101 is standalone, so each send is a separate event. Customer C20 appears twice , and both sends must remain counted.
4	Reconcile retry chain 9201 → 9202	-1	22	The chain contains 6 send attempts but represents 5 distinct customers; the retry is part of the same underlying communication.
Final	Correct target_base	—	22	Matches Finance's reported value.
